

Are you interested in developing schemes to tackle energy poverty?

SocialWatt, a project funded by the Horizon 2020 programme of the European Union, aims to enable energy companies across Europe **to develop, adopt and spread innovative schemes to alleviate energy poverty.**

How will you benefit from SocialWatt?

Ten companies will receive support from SocialWatt **to facilitate the development and implementation of innovative schemes to tackle energy poverty that will trigger energy efficiency/renewable energy interventions.** The schemes can be implemented **as part of their Energy Efficiency Obligation.** More specifically, beneficiaries will:

- › Directly learn from partners' experience on planning and implementing innovative energy efficiency schemes, by
 - participating in bilateral exchanges, tailored to each beneficiary, in order to better identify and design suitable schemes to implement.
 - receiving remote support (telephone or web based).
- › Learn about the SocialWatt tools which can help utilities and energy suppliers effectively identify energy poor households, as well as develop and monitor schemes that focus on increasing the energy efficiency of energy poor households.
- › Understand better the issue of energy poverty and strengthen their capacity in assessing and selecting schemes to implement.
- › Be able to improve their public image, build stronger customer relationships, and strengthen their Corporate Social Responsibility strategy.

What will your commitments be?

- › To participate in the SocialWatt replication activities that will be organised, during which you will spend sufficient time with SocialWatt partners, if possible located in your country, to directly learn from and/or engage with specific actions
- › To cover any travel and accommodation costs, if applicable, for your employees when attending bilateral meetings.

How can you express interest in being supported by SocialWatt?

In order to be able to receive support by SocialWatt, interested organisations should be energy companies (i.e. energy suppliers, distributors, utilities etc.) and as a minimum have:

- › A strong commitment to increase energy efficiency and address energy poverty
- › Willingness to design and implement energy efficiency/renewable energy schemes for energy poor households
- › Sufficient resources to participate in the replication activities.

Interested parties can express their interest by completing the enclosed questionnaire and **returning** this by the 11th of March 2022 to Mr. George Stravodimos at: george@IEECP.ORG.

Thereafter, ten beneficiaries will be selected to be supported, based on a clear and transparent process which includes a number of evaluation criteria set.
